

## IPMI on QuikStation®

October 2020

**CAUTION:** Updating the Intelligent Platform Management Interface (IPMI) firmware can render an RDX QuikStation inoperable.

---

### Description

To maintain system security when using the IPMI port, first change the password to prevent any third-party access by them using the default IPMI login and password. However, due to pre-programmed internal interactions between the QuikStation OS and IMPI, do not update IMPI firmware.

### Models Affected

This document applies to the QuikStation 4 and QuikStation 8 models.
