NEO Tape Libraries Not Vulnerable to Shell Shock Bug

October 2014

Overland Storage, Inc. has been investigating reports of the Shell Shock BASH vulnerability for its impact on our NEO® E-Series tape library product line.

NEO E-Series libraries use a real time operating system (RTOS) called SMX. This RTOS is not Linux-based and does not include any shell, such as BASH. For this reason, the NEO E-Series libraries are not vulnerable to the exploits of the Shell Shock bug.
